GERMAN TOWNSHIP WATER DISTRICT, INC.

2636 W. Boonville-New Harmony Rd., Evansville, IN 47720 Phone (812) 963-6403

2022 Annual Drinking Water Quality Report PWS ID: 5282003

In compliance with The Environmental Protection Agency (EPA) and Indiana Department of Environmental Management (IDEM) regulations, German Township Water District issues a Consumer Confidence Report to its members annually. The purpose of this report is to provide information regarding the quality of the water entering your residence.

As you may know, **German Township Water District, Inc. (GTWD)** purchases your water from the Evansville Water and Sewer Utility (EWSU), a public utility owned and operated by the City of Evansville.

GTWD has a fifty (50) year agreement with EWSU to supply our water. Along with the testing done by EWSU, GTWD also monitors chlorine residuals daily and submits twelve (12) bacteriological samples monthly as required by IDEM. Every water system is also required to test for Lead and Copper every three (3) years. Our Lead result (90th percentile) was zero (0) in 2020; The testing in 2022 resulted in no samples exceeding the maximum allowed contaminant level and no violations. We have also included a list of contaminates from EWSU's Consumer Confidence Report.

We would like to thank the EWSU for providing us with safe drinking water.

Este informe contiene informacion muy importante sobre su agua potable. Traduzcalo o hable con alquien que lo entienda bien.

Information on the Internet

The USEPA Office of Water https://www.epa.gov/environmental-topics/water-topics, the USEPA Office of Ground Water and Drinking Water https://www.epa.gov/ground-water-and-drinking-water and the Center for Disease Control and Prevention https://www.epa.gov/ground-water-and-drinking-water amount of information on many issues relating to water resources, water conservation, and public health. The Indiana Department of Environmental Management also has a website https://www.in.gov/idem/ that provides complete and current information on water issues in our own state. The Ohio River Valley Sanitation Commission (ORSANCO) http://www.orsanco.org/, located in Cincinnati, OH, is a wealth of information on the Ohio River and its conditions.

We would like to thank you, our Members, for giving us the opportunity to provide dependable, high quality, safe drinking water to you and your families. Please feel free to contact us at the business office with any questions you may have at (812)963-6403 or contactus@germantownshipwaterdistrict.org. More information can be found at https://www.germantownshipwaterdistrict.org/.

From your friends at German Township Water District

What's in My Water?

We are pleased to report that during the past year the water delivered to your home or business complied with or was better than, all state and federal drinking water standards. The EPA has established pollutant-specific minimum testing schedules; however, many contaminants are monitored on a daily basis. These include total chlorine, TTHM's, TOC's, nitrate, fluoride, and total coliform bacteria. Atrazine is monitored daily during the spring and summer months. Turbidity is monitored around the clock. For your information, we have included a list in the table below showing what substances were detected in the Evansville Water Department drinking water and the German Township Water District drinking water.

EVANSVILLE WATER DEPARTMENT							
egulated Contaminants							
ubstance (unit)	Year Tested	MCL	MCLG	Average Detected	Range low-high	Violation	Source
Atrazine (ppb)	2022	3	3	0.1	0-0.1	No	Herbickie Runoff
Barium (ppm)	2022	2	2	BDL	BDL	No	Erosion of natural deposits, discharge of drilling wastes
Fluoride (ppm)	2022	4	4	0.59	0.59-0.59	No	Chemical addition for improving dental health
Haloacetic Acids (HAAs) ppb; Running Annual Avg	2022	60	NA.	26.2	8.6 - 54.5	No	By-product of drinking water chlorination
litrate (ppm)	2022	10 ·	10	1	14	No	Runoff from fertilizer use, septic tanks
THM's (ppb); Running Annual Avg	2022	80	NA	33.3	21.0 - 60.1	No	By-product of drinking water chlorination
ead (ppb)	2021	AL≃15	0	90%<=0.001	≈0.001 - 0.36 ¹	No	Corresion of household plumbing
							A
Copper (ppm) Total Colliform Bacteria ⁴	2021	AL=1.3	<1.3	90%=0.025	<=0.025 - 0.056 0.001% Range	No	Corrosion of household plumbing
Presence/Absence)	2022	Annusi	ŅA	0.0% Annual	(1/1460-f/up neg)	No	Naturally present in the environment
Furbidity (NTU) ⁶	2022	0.3 NTU - TT ⁴	NA	0.03	0.02-0.16	No	Soll Runoff
Gross Alpha (pCl/L)	2019	15	0	NA	0.82	No	Erosion of natural deposits, discharge of drilling wastes
Disinfectant					-		
Substance (unit)	Year Tested	MRDL	MRDLG	Amount Detected	Range low-high	Violation	Source
otal Chlorine/Chloramines (ppm)	2022	4	4	2.8	1.9 - 3.1	No	Residual Disinfection
Fotal Organic Carbon (TOC)							
Substance (unit)	Year Tested	MRDL	MRDLG	Amount Detected	Range low-high	Violation	Source
FOC River (ppm)	2022	π•	NA	3.72	2.50 - 5.30	No	Composite measurement of oganic constituents
TOC Plant (ppm)	2022	Π°	NA	2,04	1.30 - 3.50	No	Composite measurement of ogenic constituents
Unregulated Conteminants							
Substance (unit)	Year Tested	Amount Detected					
Nickel (ppb)	2022	BDL					
Sodium (ppm)	2022	19.0					
Sulfate (ppm)	2022	34.9					
GERMAN TOWNSHIP WATER DISTRICT	·			·			
Substance (unit)	Date Sampled	MCL	MCLG	Amount Detected	Range low-high	Violation	Source
Copper ppm	2020	AL = 1.3	1.3	90% = 0.0145	Sites over AL=0	No	Erosion of netural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems
Lead ppb	2020	AL = 15	0	90% = 0	Sites over AL=0	No	Corrosion of household plumbing systems; Erosion of natural deposits
Total Chlorine ppm	2022	4 MRDL	4 MRDLG	3	3-3	No	Residual Disinfection
				40	15.8 - 54	No	
Total Haloacetic Acids (HAAs) ppb	2022	60	NA NA	50		No No	By-product of drinking water disenfection
Total Trihalomethanes (TTHM) ppb Total Coliform Bacteria*	2022	80	N/A	30	25.8 - 65.4	NO	By-product of drinking water disenfection
(Presence/Absence)	2022	5%	NA_		0%	No	Naturally present in the environment

AL (\(\lambda\)ction Level) - The concentration of a contaminant which, when exceeded, triggers treatment or other requirements or action which a system must follow.

MCL (Maximum Contaminant Level) - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

MCLG (Maximum Contaminant Level Goal) - The level of a contaminant in drinking water below which there is no known or expected risk to health.

mg/L (milligrams per liter) - a measure for concentration.

MRDL (Maximum Residual Disinfectant Level) - The highest level of a Disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for Control of microbial contaminants.

MRDLG (Maximum Residual Disinfectant Level Goal) - The level of a drinking water disinfectant, below which there is no known or expected risk to health.

NA (Not Applicable) – Either not available or not applicable.

NTU (Nephelometric Turbidity Units) - The standard measurement of turbidity.

pCi/L (picocuires per liter) - Measurement of the natural rate of disintegration.

ppb (parts per billion) – 1 microgram in 1 liter.

ppm (parts per million) - 1 milligram in 1 liter.

TT (Treatment Technique) – Λ required process intended to reduce the level of a contaminant in drinking water.

TTHMs (Total Trihalomethanes) - Disinfection by-product of chlorination.

ug/L (micrograms per liter) - a measure for concentration.

Information about Lead in Your Drinking Water

Substances Expected to be in Drinking Water

To insure that tap water is safe to drink, USEPA prescribes regulations limiting the amount of certain contaminants in water provided by public water systems. U.S. Food and Drug Administration regulations establish limits for contaminants in bottled water, which must provide the same protection for public health. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

The sources of drinking water, both tap and bottled water, include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Pesticides and herbicides, which may come from a variety of sources such as agriculture, storm water runoff and residential uses.

Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Radioactive materials, which can be naturally occurring or be the result of oil and gas production and mining activities.

Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.

Our Watershed Protection Efforts

Our water system is working with the community to increase awareness of better waste disposal practices to further protect the sources of our drinking water. We are also working with other agencies and with local watershed groups to educate the community on ways to keep our water safe.

About This Report

If you have any questions about the contents of this report, please send an email to us at: contactus@germantownshipwaterdistrict.org or please call us at (812) 963-6403. We encourage your suggestions and feedback. This is also our after hours emergency service

Special Health Information

Some people may be more vulnerable to contaminants in drinking water than the general populations. Immunocompromised persons, such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at (800) 426-4791.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. GTWD is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at https://www.epa.gov/ground-water-and-drinking-water/basic-information-about-lead-drinking-water.
